- Suitable for home or business

Driveway Alarms

1. Driveway security alarms provide a valuable extension to any home security system.
2. Users are less liable to miss a home delivery.
3. You need to know the distance between your driveway and the chosen site for your alarm receiver, so that you can buy a driveway alarm system capable of covering the required range.
4. Decide if you want your driveway security alarm to cover other areas around your property and if so, you need more than one transmitter.
5. Do you spend a lot of time in other areas of your property; you may require more than one receiver so that you are alerted all around home or office.

Location

Driveway alarm sensors can be installed in different locations to ensure that you are alerted well in advance of any human presence on your property, for example:-

- Hidden from view in your courtyard.
- Sited at your gate with an integrated intercom system.
- Beneath the eaves of your roof.
- Around the perimeter of your property.
